| Sequence 46. Application US/09660587
| Patent NO. 6392023
| GENERAL INFORMATION:
| APPLICANT: Walker, David H.
| APPLICANT: Walker, David H.
| APPLICANT: Yu, Xue-Jie
| TITLE OF INVENTION: Homologous 28-kilodalton Immunodominant Protein
| TITLE OF INVENTION: Genes of Ehrlichia canis and Uses Thereof
| TITLE OF INVENTION: Genes of Ehrlichia canis and Uses Thereof
| TITLE OF INVENTION UNMBER: US/09/660,587
| CURRENT APPLICATION NUMBER: 09/261,358
| PRIOR PILING DATE: 199-03-03
| NUMBER OF SEQ ID NOS: 46
| SEQ ID NO 46
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 ITKKIFALGLDKSBINTHSNFTRSYDPTYASSFAGFSGIIGYYVNDFRVEFEGSYENFEP

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6392023

GENERAL INFORMATION:
APPLICANT: Walker, David H.
APPLICANT: Walker, David H.
APPLICANT: Walker, David H.
APPLICANT: Yu, Xue-Jie
TITLE OF INVENTION: Homologous 28-kilodalton Immunodominant Protein
TITLE OF INVENTION: Genes of Ehrlichia canis and Uses Thereof
FILE REFERENCE: D6152CIP2
CURRENT APPLICATION NUMBER: US/09/660,587
CURRENT FILING DATE: 2000-09-12
PRIOR APPLICATION UNMBER: 09/261,358
PRIOR APPLICATION UNMBER: 09/261,358
                                                                               APPLICANT: Walker, David H.
APPLICANT: Walker, David H.
APPLICANT: Walker, Jere W.
APPLICANT: William Street W.
APPLICANT: Yu, Kue-Jie
TITLE OF INVENTION: Homologous 28-kilodalton Immunodominant Protein
TITLE OF INVENTION: Genes of Ehrlichia canis and Uses Thereof
FILE REFERENCE: D6152CIP2
CURRENT APPLICATION NUMBER: U8/09/811,007A
CURRENT FILING DATE: 2000-10-23

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                     1 MNYKRFVVGVTLSTFVFFLS......ASATLNTDYFGWEIGFRFAL 271

TITLE OF INVENTION: Homologous 28-Kilodalton Immunodominant Protein
TITLE OF INVENTION: Genes of Ehrlichia canis and Uses Thereof
FILE REPERENCE: D6152CIP2/D1
CURRENT APPLICATION NUMBER: US/10/062,624
FRIOR APPLICATION NUMBER: 09/660,587
PRIOR APPLICATION NUMBER: 09/660,587
NUMBER OF SEQ ID NOS: 46
                                                                                                                                                                                                                                                                                                                                                                                                                         ; OTHER INFORMATION: amino acid sequence of E. canis p28-9 protein US-10-062-624-46

                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Sequence 20, Application US/09846808
| Sequence 20, Application US/09846808
| Patent No. US20020064531A1
| GENERAL INFORMATION:
| APPLICANT: Walker, David H. APPLICANT: Yu, Xu-Jie
| TITLE OF INVENTION: Ehrlichia chaffeensis 28 kDa Outer Membrane
| TITLE OF INVENTION: Protein Multigene Family
| FILE REFERENCE: D6311
| CURRENT PAPLICATION NUMBER: US/09/846,808
| CURRENT FILING DATE: 2001-05-01
| PRIOR FILING DATE: 2000-05-01
| WHORE OF SEQ ID NOS: 53
| SEQ ID NO 20
| LENGTH: 271
                                                                   ; FEATURE:
; OTHER INFORMATION: amino acid sequence of E. canis p28-9 protein
US-10-731-554-46
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ..

Ehrlichia canis infection; vaccine; serodiagnostic; p28; antibacterial. New recombinant homologous 28 kilodalton immunodominant protein from Ehrlichia canis, useful for treating Ehrlichia canis infections. AAU96118 standard; protein; 271 AA Yu X, Mcbride JW; 12-SEP-2001; 2001WO-US028759. 12-SEP-2000; 2000US-00660587. (first entry) Ehrlichia canis p28-9. (RERE-) RES DEV FOUND WPI; 2002-351882/38. N-PSDB; ABK68878 Ehrlichia canis. WO200222782-A2. 02-JUL-2002 21-MAR-2002. Walker DH, AAU96118; RESULT 1 AAU96118 

The invention relates to a recombinant homologous 28 kDa immunodominant protein, P28, (I), of Ehrlichia canis. (I), a 28-kDa antigen preferably dispersed in a pharmaceutically acceptable carrier, is useful for inhibiting B. canis infection in a subject. (I) is useful in the development of vaccines and serodiagnostics that are particularly effective for disease prevention and serodiagnosis. AAU96100-AAU96118 represent the 28-kDa antigen amino acid sequences of the invention Claim 16; Fig 16; 106pp; English.
